

**FOR IMMEDIATE RELEASE**

## **Lamar Institute of Technology Goes Live with Virtual Asset Tracker**

Beaumont, TX – June 30, 2010 – Lamar Institute of Technology, a member of the Texas State University System, selected Virtual Asset Tracker, an asset tracking solution created by Radiant RFID, to track all capital and inventory items on campus. Lamar Institute of Technology is the fifth institution within The Texas State University System to choose Radiant RFID’s solution for asset tracking.

“While we are not necessarily a large campus, we have quite a few assets and it is important for us to keep a current and accurate inventory” said Isaac Barbosa, Director of Computer Services at Lamar Institute of Technology. “The technology is quick and easy to learn which was very beneficial. Our staff and student interns were able to go directly from training to conducting a live inventory within days.”

“Radiant was able to take our data export from the State Property Accounting system and plug it directly into VAT. When they arrived on-site for installation and training they had done everything in advance including importing our locations, assets, and setting up our users. This allowed us to focus on the important items for conducting an inventory” said Dawna Whitmire, Property Manager at Lamar Institute of Technology.

Radiant RFID’s Virtual Asset Tracker is a solution that supports tracking inventory via handheld devices and fixed readers. VAT is a complete solution that updates assigned location and actual location and provides email notification, check-in and check-out functionality, and a full suite of reporting. The Radiant solution can act as a stand alone application or integrate to existing software if required. The user has flexibility to define the information they would like to view as well as create custom reports.

### **About Lamar Institute of Technology**

Lamar Institute of Technology, a member of The Texas State University System, is located in Beaumont, Texas. Tracing its roots back to 1923, the institution provides a curriculum consisting of more than 50 degree and certificate programs covering a wide range of career and technical educational opportunities.
