

FOR IMMEDIATE RELEASE

**Building on prior successes within the Texas State University System,
Lamar State College-Orange chooses Radiant RFID for Asset Tracking**

Orange, TX – July 8, 2010 – Lamar State College-Orange, a member of the Texas State University System, selects Radiant RFID’s solution for asset tracking. Virtual Asset Tracker is being used to track all capital and inventory items on campus.

“We knew of Radiant RFID through the Texas State University System. As other universities within the system went live with Radiant we heard nothing but positive comments about the solution and working with Radiant. When it was time for us to evaluate our options for asset tracking we chose Radiant RFID” said Raymond Smith, Director of Purchasing for Lamar State College-Orange.

“During training Radiant took the time to answer all of our questions and worked with each member of our team to make sure they completely understood the solution. We have people involved with the project who are now our experts in RFID. The follow up from the Radiant support team post installation has been very helpful for us as we work through our implementation” continued Smith.

Radiant RFID’s Virtual Asset Tracker is a solution that supports tracking inventory via handheld devices and fixed readers. VAT is a complete solution that updates assigned location and actual location and provides email notification, check-in and check-out functionality, and a full suite of reporting. The Radiant solution can act as a stand alone application or integrate to existing software if required. The user has flexibility to define the information they would like to view as well as create custom reports.
