

CHALLENGE

The proliferation and easy transfer of gate clickers and access codes affects the safety and security of employees, property and vehicles in your corporate facility and remote locations and increases the need for security personnel and monitoring.

SOLUTION

Grant employees, contractors, and approved visitors entry into your gated facilities without the use of codes or transferable passes while maintaining greater control and security. Radiant RFID's access management solution consists of industry standard Gen 2 passive RFID tags for personnel and vehicles, gate control hardware including environmentally protected RFID interrogators, and proven reader-based software for reliable performance.

BENEFITS OVERVIEW

- Peace of mind with greater access management control
- Faster access for employees and visitors
- Allow security personnel to focus on important safety issues
- Tracking of all vehicle access, not just the first one through
- Control access for contractors and visitors with temporary tags
- Web based permissions management for individual tags including time and day access
- Manage site traffic by directing visitors or employees to specific entrances
- Protection from false claims with entrance/exit reports
- Enhance security with built-in support during temporary network and power outages

TECHNOLOGY HIGHLIGHTS

- Integrated system status monitor
- Universal gate interface module
- Combines vehicle, employee and vendor validation into one system
- EPC Gen 2 compliant system
- Robust outdoor system
- Open architecture system is easily expandable
- Web based solution with user-friendly interface
